

2012 Presenter of the Year Award

The **International Erosion Control Association (IECA)** is recognizing **Barry Fagan**, PE/PLS, CPESC, with the ***2012 Presenter of the Year Award*** for the second consecutive year. This award recognizes an outstanding presenter who demonstrates excellence in presentation skills, educational delivery and content preparation. The winner is determined through the review of presenter evaluations received at IECA's annual conference and expo.

Fagan was awarded with the *Presenter of the Year Award* for his course ***Environmental Leadership – Active or Passive Treatment at Environmental Connection 2012*** in Las Vegas.

Fagan leads the environmental program of the **Alabama Department of Transportation (ALDOT)** as ALDOT's Environmental Program Engineer. He serves as promoter, coordinator, communicator, educator and problem solver within and outside of ALDOT. He aims to spark innovation and promote a culture of continual improvement.

Fagan has more than 21 years of **road and bridge construction** experience, with nearly half of that being in areas related to environmental protection and regulatory compliance. Barry is licensed in Alabama as a Professional Engineer and Professional Land Surveyor and is a Certified Professional in Erosion and Sediment Control. He is an active member of the Alabama Erosion and Sediment Control Program Steering Committee, the AASHTO Stormwater Community of Practice and Water Working Group of the Interfaith Environmental Initiative of Alabama. Barry also serves as the Alabama Area Representative for CPESC, Inc.

When asked about the award, Fagan said: "The message presented during the workshop was that we have an obligation to lead from wherever we might be sitting. There is no one more knowledgeable, more passionate or more obvious to lead in our particular area of responsibility than we **stormwater** professionals."
